

ELECTRIC VEHICLE CHARGING OPTIONS

LEVEL 1

VOLTAGE
120V 1-phase AC

AMPS:
12-16 amps

CHARGING LOADS:
1.4 to 1.9kW

VEHICLE CHARGE TIME:
3-5 miles per hour

LEVEL 2

VOLTAGE
280V or 240 V 1-phase AC

AMPS:
12-80 amps (typ. 32 amps)

CHARGING LOADS:
2.5 to 19.2kW (typ. 6.6kW)

VEHICLE CHARGE TIME:
10-20 miles per hour

20+ for some EV models

LEVEL 3

VOLTAGE
280V or 480 V 3-phase AC

AMPS:
<100 amps

CHARGING LOADS:
50-350kW

VEHICLE CHARGE TIME:
60-80 miles in 20 minutes

The AC level one charger uses a standard household outlet. A full charge could take up to two days. This is not recommended for a permanent charging option but can be used if visiting a residence without an EV charger.

The AC level two chargers are what most EV owners use to charge at home. It is a good idea to speak to an electrician when adding an EV charger of any size. LREC sells 7.7, 10, and 11.5 kW chargers through the Energy Wise MN store.

The DC level three fast charger are commercial chargers typically found at businesses and fuel stations.

PLUG IN WITH LREC

LREC offers three rate options: *time-of-use*, *storage*, and *plug-in hybrid electric vehicle (PHEV)*. The time-of-use rate allows members to choose what time they charge their EV and how much they want to pay. The storage rate has predetermined charging times set by LREC and is the lowest cost option. The PHEV charging rate remains the same at all times but is controlled with LREC's dual fuel program, which is approximately 3.5 days/month for 4.5 hours of control. Utilizing these rate options requires a separate sub-metered circuit be installed to accommodate an Electric Vehicle Supply Equipment (EVSE) charging station.
